ravikirandotks@gmail.com | +91.988.682.8569 | <https://www.linkedin.com/in/ravikiranks/>

Ravi is **programmer, author, and freelancer** residing in Bangalore. Over a decade of **hands-on career**, he has developed **#9 network products** for top networking companies including **Cisco, Juniper**. Among 9, **#4** products have made upwards of **\$28M in revenue**; a **44% success rate**, while industry average is **25%**. In academia, he **ranks #1** with **82% aggregate in Masters** under faculty of Computer Science at **RD University, Jabalpur**. He **pens papers** on **networking topics**, contributes to **open-source**, and hacks **new tech** in his spare time. He is awarded **#6** times for **timely delivery** of products, **solving critical problems**, and help in securing **design wins**.

Authored Articles

- **Increasing Carrier-Class High Availability** - TechOnline, PICMG-Embedded
- **Load balancing between server blades within ATCA platforms** - TelecomAsia, Radisys Blog.

Core Competencies

Linux Containers . Kernel Programming . Platform Infra . Resiliency . Load Balancers . Open Source
NXOS . JUNOS . DCN . VLAN . VNTAG . VEPA . VRRP . IS-IS . SCTP . MLAG . FCoE . LLDP . SAF
Broadcom Trident2 . Netlogic XLR . Fulcrum Bali . 6Wind FastPath . Custom ASICs . Bonding Driver

Professional Summary

Since 2015 *Storage Networks Developer* for **Cisco Systems, Inc.**

As Individual Contributor, delivers FCoE access features on **N9000 Leaf/Spine** and **N7000 DC Core switches**. Features are FCoE support for Fabric Extender, FEX Active-Active, vPC/MLAG, Phy-Port vPC, and FabricPath. Also delivers Linux **LXC container based NXOS ISSU** support for FCoE services, KLMs on N9000 ToR switches.

- Develops innovative feature for system-wide runtime debug trace logging without affecting performance.
- Ravi is **invited for presenting it to NXOS Architecture Forum** and feature is used on all product lines.

2012 - 2014 *Core Router Developer* for **Juniper Networks, Inc.**

As Individual Contributor, develops control-plane infra, inter-chassis topology monitoring, chassis management and protocol role assignment for **PTX family** multi-chassis core router. Develops *the fault detection, isolation, and recovery framework* for high-speed SERDES based ASIC interconnects in **T-series standalone** products.

- Develops innovative method of **reusing IS-IS as loop-free topo-mgmt solution** without overhead of STP

2007 - 2011 *Network Solutions Developer* for **Continuous Computing, Ltd.**

As a Technical Leader, delivers **#2** carrier-grade and **#2** enterprise-grade solutions mentoring a **team of 6**.

- **FastPath SCTP** is a carrier-grade, highly optimized, stateful gateway solution. It gives bi-di throughput of **1M pps** of 1500B SCTP packets over 10G links. It extends 6Wind FastPath stack on NetLogic XLR NPUs. Ravi delivers complex zero-copy packet forwarding & scheduler, in-place IPsec, DMA and DNS support.
- **Layer2 HA** is an enterprise-grade network resilience solution. It gives **sub-msec** failover, weighted traffic mapping as hub-n-spoke, and faster convergence by VRRP enhancement. It is implemented as extension to Fulcrum ControlPoint on Switch and Bonding Driver enhancement on x86 Blades. Ravi delivers entire product, from ideation to deployment, pens white papers, customer support. It generates **>\$3M** revenue.
- **FlexBalance** is an enterprise-grade server load balancer. It does **statistical hashing** of traffic marked by **L4 flows**, MPLS tags, physical port-groups using DWRR & CBQ schedulers. It is implemented as pattern-match & scheduler enhancement using FFU, TCAM. Ravi delivers entire product from code to docs single

handedly, works with architect and QA in different geographies, helps in deployment, customer support. Huge commercial success, generated **>\$8M** in revenue, and helped in more than **12 design wins**.

- **FlexTCA** is a carrier-grade, service availability product that pre-integrates Trillium stacks with GoAhead Saffire middleware to run out-of-box on ATCA chassis. It implements OAM interface over SNMP & Web, Compute blade resilience using SAF SAI, Protocol HA using DFTHA layer, Control plane HA using SAF checkpoint service, and Chassis management using SAF HPI. Ravi is responsible for design, code and testing of **complex SAF-Trillium integration layer** that represents core value-add of product offering.

2004 - 2006

Freelance Developer for various [Bangalore based startups](#)

As a Technology Consultant for Bangalore based startups, he has helped in feasibility analysis **by prototyping**, **solving design challenges**, implementation nits, **critical bugs for timebound resolution**, and optimization. Majority work is ghost-writing, no attribution. References are provided when possible. Contact me, for details.

Open Source Contributions

- [Ethernet Channel Bonding Driver enhancements](#)
- [OpenSAF bug-fixes](#)
- [OpenSolaris bug-fixes](#)
- [Random Playbook](#)

Freelance Consultations

- SCTP based out-of-box, stateful, **L4 load-balancer design** for SS7 tunneling and services protocols.
- **Line-rate IPSec Security Gateway** optimization and debugging. It uses Netlogic XLP NPUs for LC.
- Fix critical kernel bugs for **real-time mirroring file-system** and related resilience infra on Solaris servers.
- **J2ME Mobile App and Web platform** for seamless sync of mobile DB to central server over internet.
- **MANET protos** for ad-hoc mobile gaming, sensor protos using Gumstix SBC for agri sector.
- AJAX integration for **HR Management Web App** using Java frameworks viz. Struts, Spring, JSP.

Curious coder, who works under *tight deadlines*, **automates as hobby**, listens to understand, **gets job done**. **13 yrs** in industry, **4** blockbuster products, **>\$28M** revenue, **#1** in academia, **827+** bugs, **2** papers, ... counting
